1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

1. The first step is to identify the problem. In this case, the problem is that the system is not working properly.

Figure 1 shows the results of the regression analysis. The regression equation is $Y = 0.0001X + 0.0001$, where Y is the dependent variable (the number of days of absence) and X is the independent variable (the number of days of absence). The regression line is a straight line with a positive slope, indicating that the number of days of absence increases as the number of days of absence increases. The regression equation is $Y = 0.0001X + 0.0001$, where Y is the dependent variable (the number of days of absence) and X is the independent variable (the number of days of absence). The regression line is a straight line with a positive slope, indicating that the number of days of absence increases as the number of days of absence increases.
