ASTORIA, ORE.

The first of these is the fact that the
 system is not a simple one. It is a
 complex one, and it is not a simple
 one. It is a complex one, and it is not
 a simple one. It is a complex one, and
 it is not a simple one. It is a complex
 one, and it is not a simple one. It is a
 complex one, and it is not a simple one.

1. The first step is to identify the problem. This involves understanding the symptoms and the context in which they are occurring.

Figure 6

(a) **Comparison of the measured and predicted values of the peak shear stress ratio ($\tau_{\text{peak}}/\sigma'_v$) versus the normalized vertical effective stress (σ'_v/σ'_{v0}) for the specimens tested under different initial relative densities.**

(b) **Comparison of the measured and predicted values of the residual shear stress ratio (τ_r/σ'_v) versus the normalized vertical effective stress (σ'_v/σ'_{v0}) for the specimens tested under different initial relative densities.**
