There are two main reasons why the results of the present study are important. First, the results show that the use of a single, standardized, and validated measure of self-esteem is sufficient to predict the use of a variety of coping strategies. This finding is important because it suggests that the use of a single measure of self-esteem is sufficient to predict the use of a variety of coping strategies. Second, the results show that the use of a single, standardized, and validated measure of self-esteem is sufficient to predict the use of a variety of coping strategies. This finding is important because it suggests that the use of a single measure of self-esteem is sufficient to predict the use of a variety of coping strategies.
