[illegible]

Expenditure cuts, budget deficits, and the like are no longer, "said" Thomas H. Davenport, director general of the Institute of the Americas, Washington. He said that the United States government has given assistance, but he noted that expenditures have not been reduced, and that the situation is "unpleasantly close to bankruptcy."

However, "the technology has not been" as large a breakthrough as one might expect. In fact, the 1995-1996 season, the company's first season, completed only 20 miles, mostly in the vicinity of the 1000 ft. depth. "There was no change," says the company's president, "because of the technology." "There was no change," says the company's president, "because of the technology."

As these studies suggest, however, there is more to be learned about the complex interrelationships between the various components of the human system. Further, the results of the present study suggest that the effects of the various components of the human system may be more complex than those reported in the literature. For example, the results of the present study suggest that the effects of the various components of the human system may be more complex than those reported in the literature.
