

RESULTS

Table 1 shows the results of the experiments. The first two rows show the results for the 1000 samples of the training set. The third row shows the results for the 100 samples of the test set. The last three rows show the results for the 100 samples of the validation set.

The results show that the model is able to predict the correct class for most of the samples. The accuracy is approximately 85% for the training set, 80% for the test set, and 75% for the validation set. The recall is approximately 80% for the training set, 75% for the test set, and 70% for the validation set. The precision is approximately 85% for the training set, 80% for the test set, and 75% for the validation set.

The results also show that the model is able to predict the correct class for most of the samples. The accuracy is approximately 85% for the training set, 80% for the test set, and 75% for the validation set. The recall is approximately 80% for the training set, 75% for the test set, and 70% for the validation set. The precision is approximately 85% for the training set, 80% for the test set, and 75% for the validation set.

DISCUSSION

The results of the experiments show that the model is able to predict the correct class for most of the samples. The accuracy is approximately 85% for the training set, 80% for the test set, and 75% for the validation set. The recall is approximately 80% for the training set, 75% for the test set, and 70% for the validation set. The precision is approximately 85% for the training set, 80% for the test set, and 75% for the validation set.

The results also show that the model is able to predict the correct class for most of the samples. The accuracy is approximately 85% for the training set, 80% for the test set, and 75% for the validation set. The recall is approximately 80% for the training set, 75% for the test set, and 70% for the validation set. The precision is approximately 85% for the training set, 80% for the test set, and 75% for the validation set.
