The image consists of three separate horizontal bar charts. Each chart has a series of colored squares representing different gray levels. The first chart on the left shows a distribution where most pixels are dark gray, with a few light gray pixels at the end. The middle chart shows a more uniform distribution with several medium gray pixels. The third chart on the right shows a distribution where most pixels are light gray, with a few dark gray pixels at the end.

A horizontal grayscale bar consisting of 10 equally sized rectangular segments. The segments transition in shade from dark gray on the left to light gray on the right, creating a smooth gradient effect.

A highly pixelated and noisy grayscale image. The image consists of a dense grid of dark and light gray blocks of varying sizes and orientations, creating a mottled, abstract texture. There is no discernible text or specific subject matter.

Figure 1. A composite image showing the spatial distribution of the three main components of the magnetic field in the solar corona. The background image shows the solar disk with a coronal hole. The red component is the vertical magnetic field, the green component is the horizontal magnetic field, and the blue component is the radial magnetic field.
