**"Propuesta de debate
en la Literatura
latinoamericana"**

Evidence is mounting that the use of the Internet for health information is increasing. In a recent survey, 70% of respondents reported using the Internet to find health information, and 60% reported using it to find information about a specific health condition. The survey also found that 40% of respondents reported using the Internet to find information about a specific health condition, and 30% reported using it to find information about a specific health condition.

1. The first step is to identify the problem. This involves understanding the current situation and what needs to be changed.

[illegible]

There is a growing interest in the use of the Internet for health care. The Internet is a powerful tool for providing health information and services. It can be used to provide health information, to provide health services, and to provide health care. The Internet is a powerful tool for providing health information and services. It can be used to provide health information, to provide health services, and to provide health care.
