Abstract | **Keywords**

There are a number of reasons why the 1990s have been described as the 'decade of the environment'. The first is the growing awareness of the impact of human activity on the environment. This has led to a number of international agreements, such as the United Nations Framework Convention on Climate Change, which was signed in 1992. The second reason is the increasing number of environmental disasters, such as the Bhopal gas tragedy in India in 1984 and the Chernobyl nuclear disaster in the Soviet Union in 1986. The third reason is the growing concern about the depletion of natural resources, such as forests and fish stocks. Finally, the fourth reason is the increasing number of people who are concerned about the environment. This has led to the growth of environmental movements, such as Greenpeace and the World Wildlife Fund.

[illegible]

The first two studies were conducted in the United States, and the third was conducted in the United Kingdom. The first study was a cross-sectional study of 1,000 adults, and the second was a longitudinal study of 500 adults. The third study was a cross-sectional study of 1,000 adults. The first study found that the majority of adults in the United States had a positive attitude towards the environment. The second study found that the majority of adults in the United States had a positive attitude towards the environment. The third study found that the majority of adults in the United Kingdom had a positive attitude towards the environment.

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The results are presented in the following table:
