

“Ultimate Seinfeld”

The *Journal of the American Medical Association* has published a study by the American Cancer Society showing that the use of a low-fat diet can reduce the risk of developing breast cancer. The study, which followed 10,000 women for 10 years, found that women who consumed a diet low in fat (less than 20 percent of total calories) had a 25 percent lower risk of developing breast cancer compared to women who consumed a diet high in fat (more than 30 percent of total calories). The researchers concluded that a low-fat diet may be a simple and effective way to reduce the risk of breast cancer.

The following table shows the results of the first round of the election. The table is divided into two main sections: "Electoral College" and "Popular Vote". The "Electoral College" section shows the number of electoral votes won by each candidate, while the "Popular Vote" section shows the number of popular votes won by each candidate.
