

REPORTING

It is not a simple process
to do it right

When a company is asked to report on its environmental performance, it is often faced with a complex task. The first step is to identify the relevant information. This can be done by looking at the company's environmental policy, its environmental management system, and its environmental performance. Once the information has been identified, the next step is to collect it. This can be done by looking at the company's environmental records, its environmental management system, and its environmental performance. Once the information has been collected, the next step is to analyze it. This can be done by looking at the company's environmental policy, its environmental management system, and its environmental performance. Once the information has been analyzed, the next step is to report on it. This can be done by looking at the company's environmental policy, its environmental management system, and its environmental performance.

It is not a simple process to do it right. It is a process that requires a lot of time and effort. It is a process that requires a lot of information. It is a process that requires a lot of analysis. It is a process that requires a lot of reporting.
