1. *Staphylococcus aureus* (Staphylococcus aureus) is a Gram-positive, spherical bacterium that is commonly found on the skin and in the nose of humans and animals. It is a facultative anaerobe, meaning it can grow with or without oxygen. *S. aureus* is a major cause of skin infections, such as abscesses, boils, and impetigo. It can also cause more serious infections, such as pneumonia, osteomyelitis, and sepsis. *S. aureus* is resistant to many antibiotics, making it a difficult pathogen to treat.
