Class - 2nd Year

PAPER OR COLOUR WORK.

The student is to produce a design of his own, either in paper or in colour, based on the octagon. Considering the use of any form of space filling, the student must present his own original design, and not copy any designs given in the book. The design is to consist of eight points, each point being a polygonal shape. The student is to draw his design on a separate sheet of paper, and then transfer it to the octagon. The student is to use a brush to draw the design, and to use a variety of colors to create a strong contrast in the design.

CLAY MODELLING.

Clay modelling is to be used to illustrate different methods of space filling. The student is to model a simple object, such as a corn cob, and then repeat the process in the same way. It will be essential for the student to use a brush to draw the design, and to use a variety of colors to create a strong contrast in the design.

BRUSH DRAWING.

The student is to produce a design of his own, either in paper or in colour, based on the octagon. The student is to use a brush to draw the design, and to use a variety of colors to create a strong contrast in the design.

The octagon, space filling and surface
