

ANTIBACTERIAL ACTIVITY AND Cytotoxicity of *Leuconostoc*

Antibacterial Activity

The antibacterial activity of biosurfactants of *Leuconostoc* is relatively strong compared to the antibiotics and other organic acids. Some of the biosurfactants have been reported to have antibacterial activity.

Some of the *Leuconostoc* biosurfactants are the organic acids such as the organic acids produced by the *Leuconostoc* species *Leuconostoc* *brevis*.

The organic acids have been used as antibiotics in *Leuconostoc* species. Some biosurfactants are reported to have antibacterial activity and some have not been reported.

The organic acids from the *Leuconostoc* species have been reported to have antibacterial activity. Some organic acids such as citric acid, lactic acid, and acetic acid have been reported to have antibacterial activity. Some organic acids such as citric acid, lactic acid, and acetic acid have been reported to have antibacterial activity.

The organic acids from the *Leuconostoc* species have been reported to have antibacterial activity. Some organic acids such as citric acid, lactic acid, and acetic acid have been reported to have antibacterial activity.
