The authors of the study reported a correlation between the amount of time spent on the Internet and the amount of time spent on other activities. They found that as the amount of time spent on the Internet increased, the amount of time spent on other activities decreased. This suggests that the Internet may be a time-consuming activity that can interfere with other activities.

Depression and anxiety disorders are common mental health conditions that can significantly impact a person's quality of life. These conditions often go hand in hand, with one increasing the risk of the other. Understanding the symptoms and seeking professional help is crucial for effective management and recovery.
