As the 1990s unfolded, there were two solid reasons for the growing importance of the Internet as a business tool. First, the explosion of e-mail and the World Wide Web made it possible for companies to communicate with customers and suppliers in a way that was both fast and cheap. Second, the Internet provided a new platform for companies to sell their products and services directly to consumers.

The following information is for the purpose of providing a general overview of the project and is not intended to be a substitute for the detailed information provided in the project description. 1. The main question is: how can we find the maximum value of the function $f(x) = x^2 - 4x + 5$ on the interval $[0, 4]$? The function is a parabola opening upwards, with its vertex at $(2, 1)$. Since the vertex is inside the interval, the maximum value is at the endpoints. Evaluating $f(0) = 5$ and $f(4) = 5$, we find the maximum value is 5.

Let us now consider the case of a $\mathbb{Z}_2$ -invariant fermion system. In this case, the fermion system is invariant under the $\mathbb{Z}_2$ symmetry, and the fermion system is invariant under the $\mathbb{Z}_2$ symmetry. In this case, the fermion system is invariant under the $\mathbb{Z}_2$ symmetry, and the fermion system is invariant under the $\mathbb{Z}_2$ symmetry.
