CONVULSION. Epilepsy, characterized by spasms or violent convulsions of muscles, is treated by two powerful remedies, as is reported by Dr. John Williams, M.D., professor of Logic in New York University, published last August in New York "Medical Record." He states that convulsions do not occur without antecedent and subsequent changes in the blood, and that the treatment should be directed to the blood. He reports that Calomel, either in Saccharated form, or in capsules of Gelatin, followed by a cathartic, such as the Medical Compound, manufactured by J. C. Ayer & Co., Lowell, Mass., will induce the desired effect. He states that Calomel will induce the desired effect, and that the Medical Compound will induce the desired effect. He states that Calomel will induce the desired effect, and that the Medical Compound will induce the desired effect.

19. The following are the results of a survey of 100 people who were asked to rate their satisfaction with their current job. The results are as follows:

Annual egg counts conducted on the Mississippi River Delta, 1960-1969, are shown in Table 1. The highest egg counts were recorded in 1961, 1962, and 1963, with 1962 having the highest egg count.
